

Class Retriever™

Giving Parents Visibility into Google Classroom

An overview for school leaders

What Is Class Retriever?

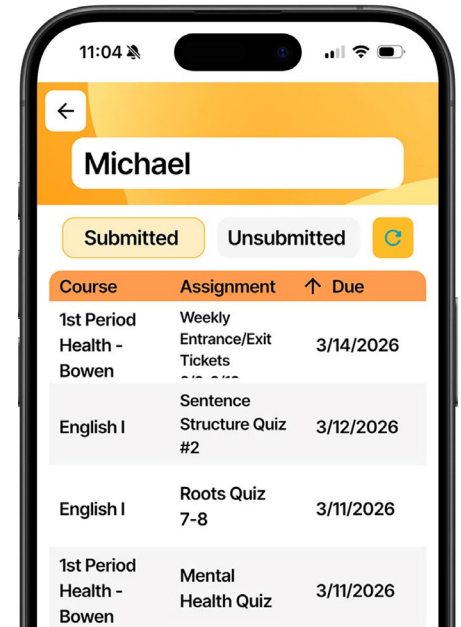

Class Retriever is a mobile app that lets parents and students see all Google Classroom assignments in one place.

What Problems Does It Solve?

- **Parents get visibility.** Google Classroom does not have a parent portal. Class Retriever lets parents support students who have a hard time tracking their assignments.
- **Students see everything at once.** They no longer have to open every Google Classroom subfolder to see each assignment.

How It Works

- Sort assignments by whether they are submitted or unsubmitted.
- Sort by course or due date to see what's due next, or what's most overdue.
- Assignments that are missing **and** late are **colored red**.
- As soon as a student submits an assignment, a refresh shows the updated status.

Is Student Data Protected?

Yes. Class Retriever uses Google's security protocols and is:

- ✓ FERPA compliant
- ✓ COPPA compliant
- ✓ Verified by Google
- ✓ Verified by Apple

Getting Started in Your District

1. **Authorize the Class Retriever API in Google Classroom.** Without this, the app won't work.
2. Families download Class Retriever from their mobile app store.

Who can use it: students ages 13+. Parents with kids at different schools can add them all, as long as each school or district allows Class Retriever.

What Families Are Saying

"My student had completed three assignments but forgot to click 'Submit' in Google Classroom for them. Class Retriever showed that, so she was able to turn them in - on time!"

"Our daughter had a big science project due on Friday. We saw this in Class Retriever on Monday and were able to help her plan so she completed it early."

Who Created Class Retriever?

Class Retriever was built by a mom in Missoula, Montana, who learned how to code (she didn't use AI) to build an app to help her kids and others' kids.
